

## **Upgrading IBM Lotus Sametime Standard Server 7.5.1 CF2**

**Steps to upgrade IBM Lotus Sametime Standard Server from 7.5.1 CF2 to 8.0.2 on IBM Lotus Domino 8.0.2 FP6**

***Author: Soumo Chakraborty, IT Specialist, IBM***

## Before you begin

When upgrading Sametime on Microsoft® Windows, the install program provides the option of preserving your existing Sametime data, which includes meeting information, contact lists and configuration settings, or overwriting this information.

When backing up your Sametime data, include the following information:

### *Sametime server data to back up*

<b>Data to back up</b>	<b>Comments</b>
names.nsf	This is optional if you can replicate from another Domino® server. After upgrading to this release of Sametime, you will need to convert the native Domino Directory to use LDAP format in order to register the server with the Sametime System Console.
notes.ini	Back up this file for possible reference after upgrade.
da.nsf	Back up this file if you are using directory assistance.
vpuserinfo.nsf	This contains user storage and privacy information, such as contacts lists. If you upgrade from a release earlier than 7.5, you will need to upgrade the design on this database.
sametime.ini, stconfig.nsf	It is not necessary to backup these files on IBM i as they are saved automatically during the upgrade process. The original sametime.ini and stconfig.nsf files are saved in a subdirectory of the server data directory. The name of the subdirectory is <i>STprevious_versionBU</i> . For example, the subdirectory name is <i>ST751BU</i> if you upgraded from Sametime® 7.5.1, and <i>ST80BU</i> if you upgraded from Sametime 8.0.
All customized data files, templates or applications (.ntf, .mdm, .scr, .bmp, .mac, .smi, .tbl)	

All ID files, desktop.dsk, and pubnames.ntf	
meetingserver.ini	(Sametime Standard only) It is not necessary to back up this file on IBM i because it is saved automatically during the upgrade process; the original meetingserver.ini file is saved in the server data directory as meetingserver.bak.
All recorded meeting files (.rap)	(Sametime Standard only)

***Step by step guide to upgrade Sametime Standard server 8.0.2 from 7.5.1 CF2:***

1. Double click on the Lotus Sametime 8.0.2 installer to begin the extraction of installation files.

2. Provide the location to Unzip the installation files.

3. After the extraction is complete, the wizard will prompt the as shown above.

4. Choose “English” to begin the upgrade.

5. Click on “Install the Sametime Server”

6. The install wizard starts.

7. Choose default language as English and click OK.

8. Accept the Licence Agreement.

9. Click Next to begin the installation

10. Setup automatically detected an existing Sametime version installed in the system. Select "Upgrade existing instance" to perform upgrade of the Sametime existing version. Note: Install a new instance will remove all existing data of the Sametime server.

11. Setup automatically detects if the server id is password protected. If the server is password protected then it will prompt you to enter the password to proceed.

12. Review the summary to begin the final installation.

13. The progress bar shows the estimated installation percentage with necessary file updates.

14. This shows a successful installation completion prompt. Please restart the OS post clicking on Finish button. Once the OS restarts, validate the Lotus Domino, Sametime services and authentication.
